

in a 56 percentage point increase in C's ownership of L stock, and L has an ownership change. Therefore, the L loss subgroup has an ownership change on that day with respect to the loss carryovers from Year 1.

(d) Paragraph (b)(1)(i) of this section requires that section 382 and the regulations thereunder be applied to M to determine whether M (and therefore the M loss group) has an ownership change with respect to the net operating loss carryover from Year 2 on June 9, Year 3, a testing date because of A's sale of M stock to C. The sale results in a 70 percentage point increase in C's ownership of M stock, and M has an ownership change. Therefore, the M loss group has an ownership change on that day with respect to that loss carryover.

(3) *Special adjustments*—(i) *Common parent succeeded by a new common parent.* For purposes of determining if a loss group has an ownership change, if the common parent of a loss group is succeeded or acquired by a new common parent and the loss group remains in existence, the new common parent is treated as a continuation of the former common parent with appropriate adjustments to take into account shifts in ownership of the former common parent during the testing period (including shifts that occur incident to the common parent's becoming the former common parent).

(ii) *Newly created loss subgroup parent.* For purposes of determining if a loss subgroup has an ownership change, if the member that is the loss subgroup parent has not been the loss subgroup parent for at least 3 years as of a testing date, appropriate adjustments must be made to take into account owner shifts of members of the loss subgroup so that the structure of the loss subgroup does not have the effect of avoiding an ownership change under section 382. (See paragraph (b)(3)(iii) *Example 3* of this section.)

(iii) *Examples.* The following examples illustrate the principles of this paragraph (b)(3).

*Example 1. New common parent acquires old common parent.* (a) A, who owns all the L stock, sells 30 percent of the L stock to B on August 26, Year 1. L owns all the L1 stock. The L group has a consolidated net operating loss arising in Year 1 that is carried over to Year 3. On July 16, Year 2, A and B transfer their L stock to a newly created holding company, HC, in exchange for 70 percent and 30 percent, respectively, of the HC stock. HC, L, and L1 thereafter file consolidated returns. Under the principles of § 1.1502-75(d), the L loss group is treated as remaining in existence, with HC taking the place of L as the new common parent of the loss group. The following is a graphic illustration of these facts:

(b) On November 11, Year 3, A sells 25 percent of the HC stock to B. For purposes of determining if the L loss group has an ownership change under paragraph (b)(1)(i) of this section on November 11, Year 3, HC is treated as a continuation of L under paragraph (b)(3)(i) of this section because it acquired L and became the common parent without terminating the L loss group. Accordingly, HC's testing period commences on January 1, Year 1, the first day of the taxable year of the L loss group in which the consolidated net operating loss that is carried over to Year 3 arose (see § 1.382-2T(d)(3)(i)). Immediately after the close of November 11, Year 3, B's percentage ownership interest in the common parent of the loss group (HC) has increased by 55 percentage points over its lowest percentage ownership during the testing period (zero percent).

Accordingly, HC and the L loss group have an ownership change on that day.

*Example 2. New common parent in case in which common parent ceases to exist.* (a) A, B, and C each own one-third of the L stock. L owns all the L1 stock. The L group has a consolidated net operating loss arising in Year 2 that is carried over to Year 3. On November 22, Year 3, L is merged into P, a corporation owned by D, and L1 thereafter files consolidated returns with P. A, B, and C, as a result of owning stock of L, own 90 percent of P's stock after the merger. D owns the remaining 10 percent of P's stock. The merger of L into P qualifies as a reverse acquisition of the L group under § 1.1502-75(d)(3)(i), and the L loss group is treated as remaining in existence, with P taking the place of L as the new common parent of the L group. The following is a graphic illustration of these facts:

(b) For purposes of determining if the L loss group has an ownership change on November 22, Year 3, the day of the merger, P is treated as a continuation of L so that the testing period for P begins on January 1, Year 2, the first day of the taxable year of the L loss group in which the consolidated net operating loss that is carried over to Year 3 arose. Immediately after the close of November 22, Year 3, D is the only 5-percent shareholder that has increased his ownership

interest in P during the testing period (from zero to 10 percentage points).

(c) The facts are the same as in paragraph (a) of this *Example 2*, except that A has held  $23\frac{1}{3}$  shares ( $23\frac{1}{3}$  percent) of L's stock for five years, and A purchased an additional 10 shares of L stock from E two years before the merger. Immediately after the close of the day of the merger (a testing date), A's ownership interest in P, the common parent of the L loss group, has increased by  $6\frac{2}{3}$  percentage points over her lowest percentage
